

watsonx.ai: next-  
generation enterprise  
studio for AI builders

A new era for AI

Generative AI and foundation models are making massive AI scalability possible.

A foundation model is an AI model that trains on large amounts of general data, which can be adapted easily to new scenarios and use cases.

# Traditional AI Models

Each model is trained for a  
specific task

1,000s to 1,000,000s labeled data  
points per task

# Traditional AI Models

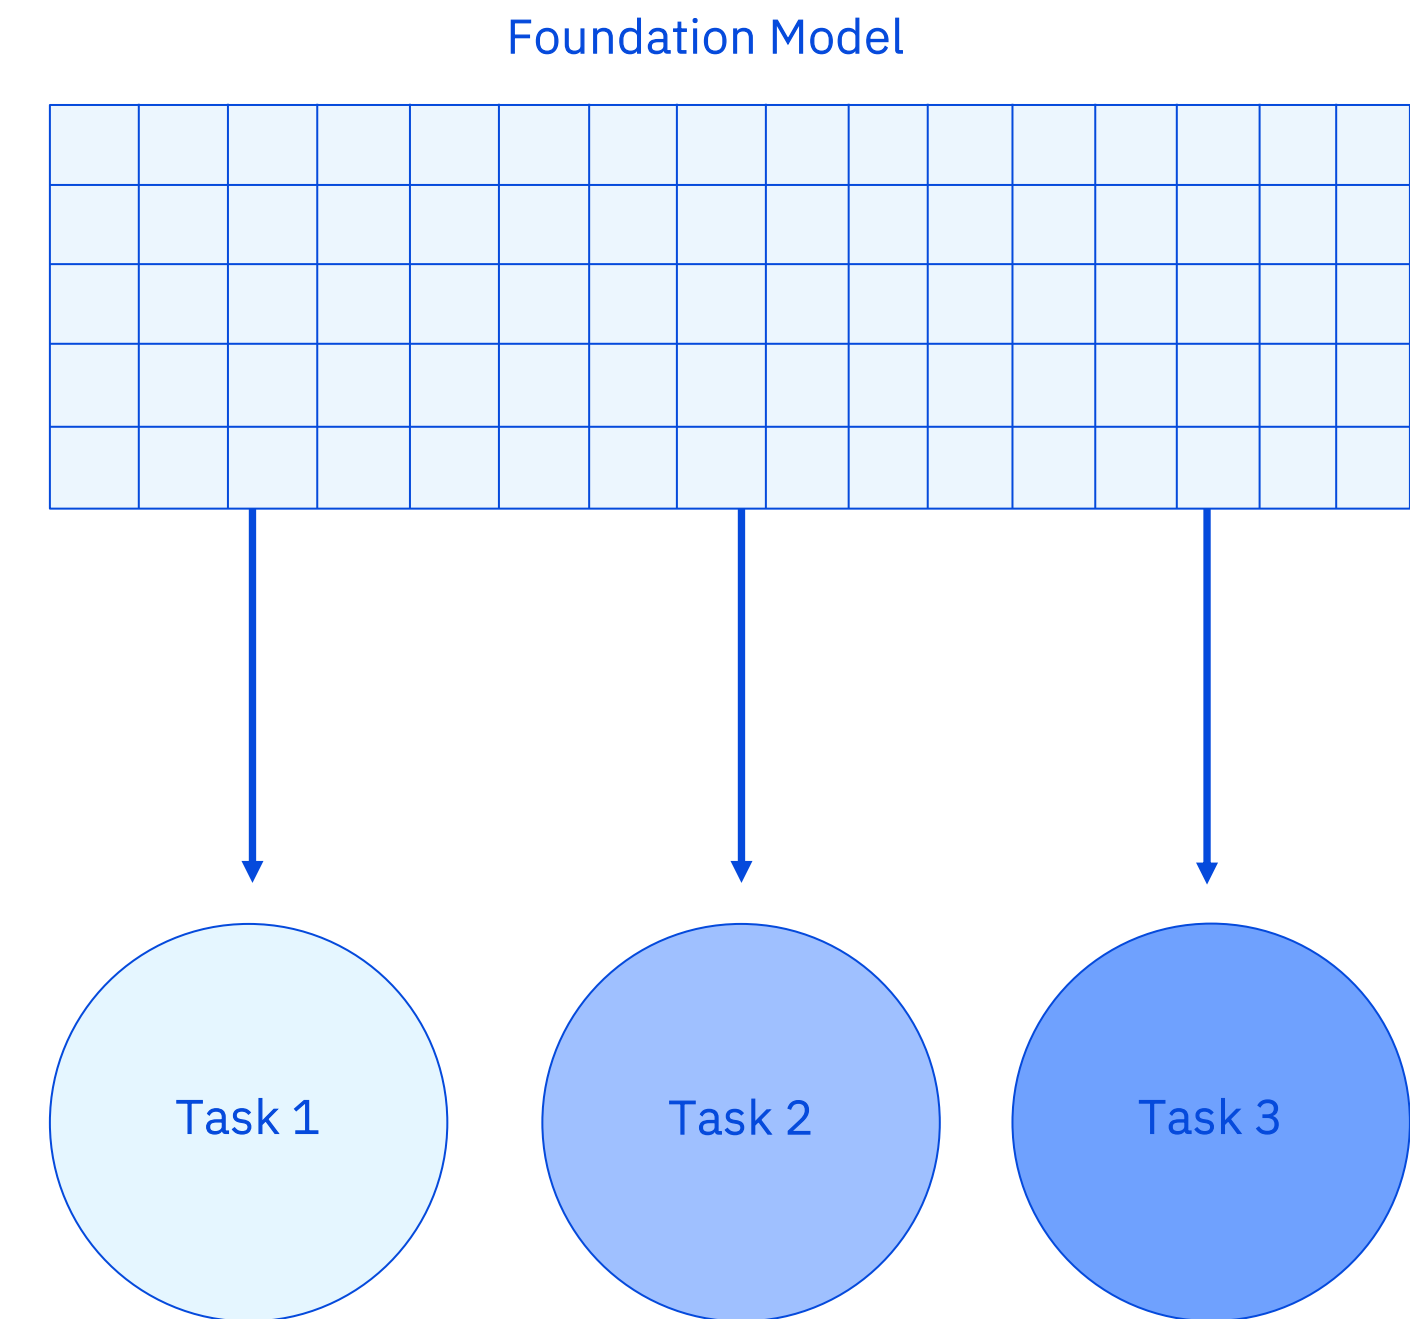

Each model is trained for a specific task

1,000s to 1,000,000s labeled data points per task

# Foundation Models

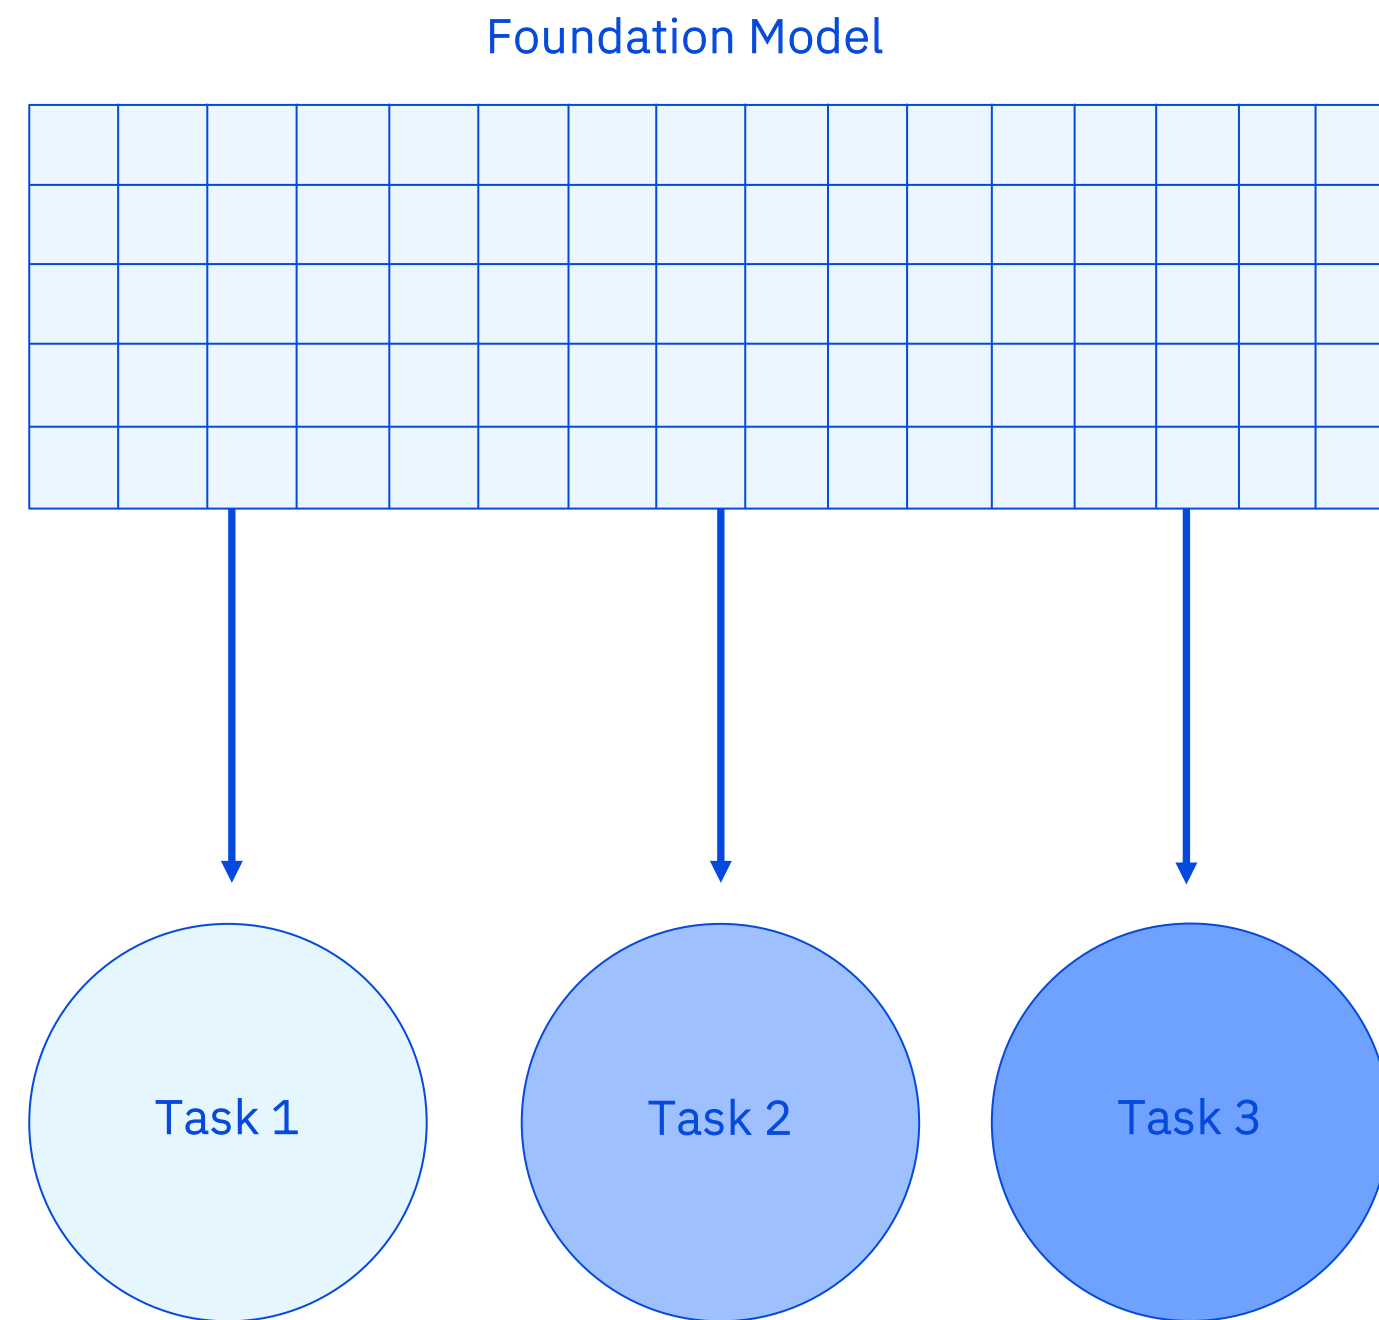

One model that can address many tasks

0 to 1,000s labeled data points per task

# Foundation Models

One model that can address many tasks

0 to 1,000s labeled data points per task

# Prompting Foundation Models

Customized for additional use cases

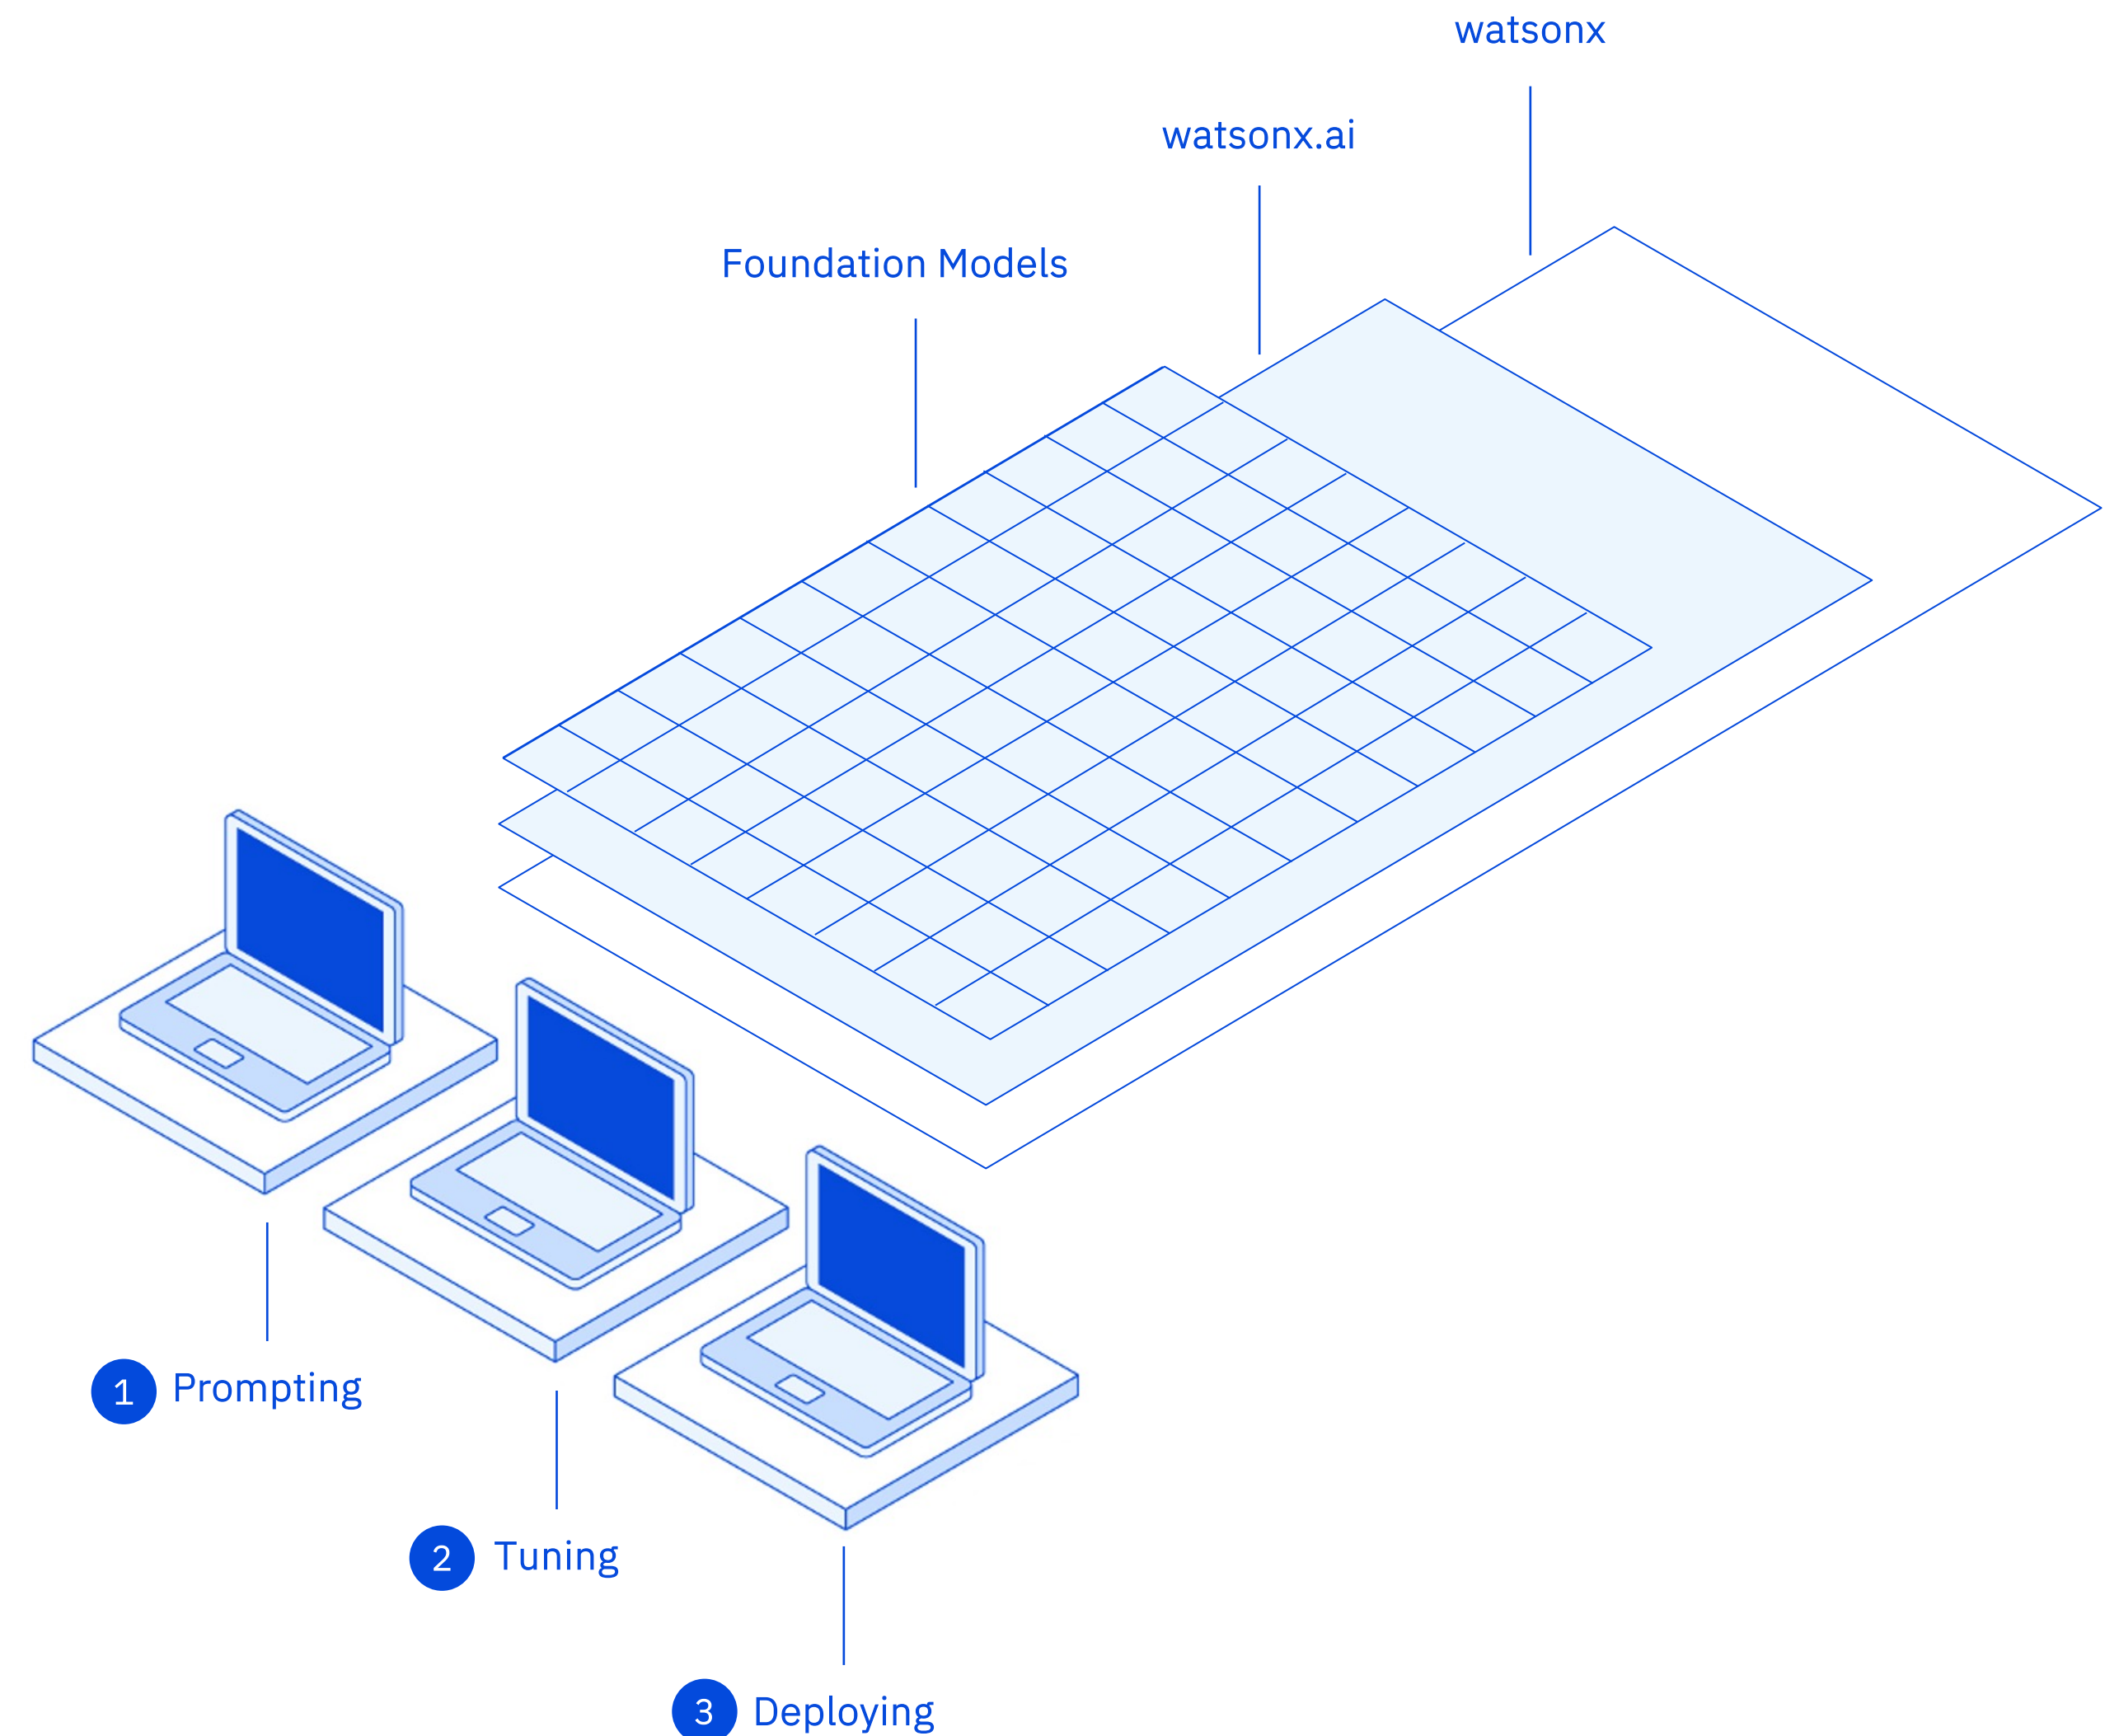

# Prompting Foundation Models

Customized for additional use cases

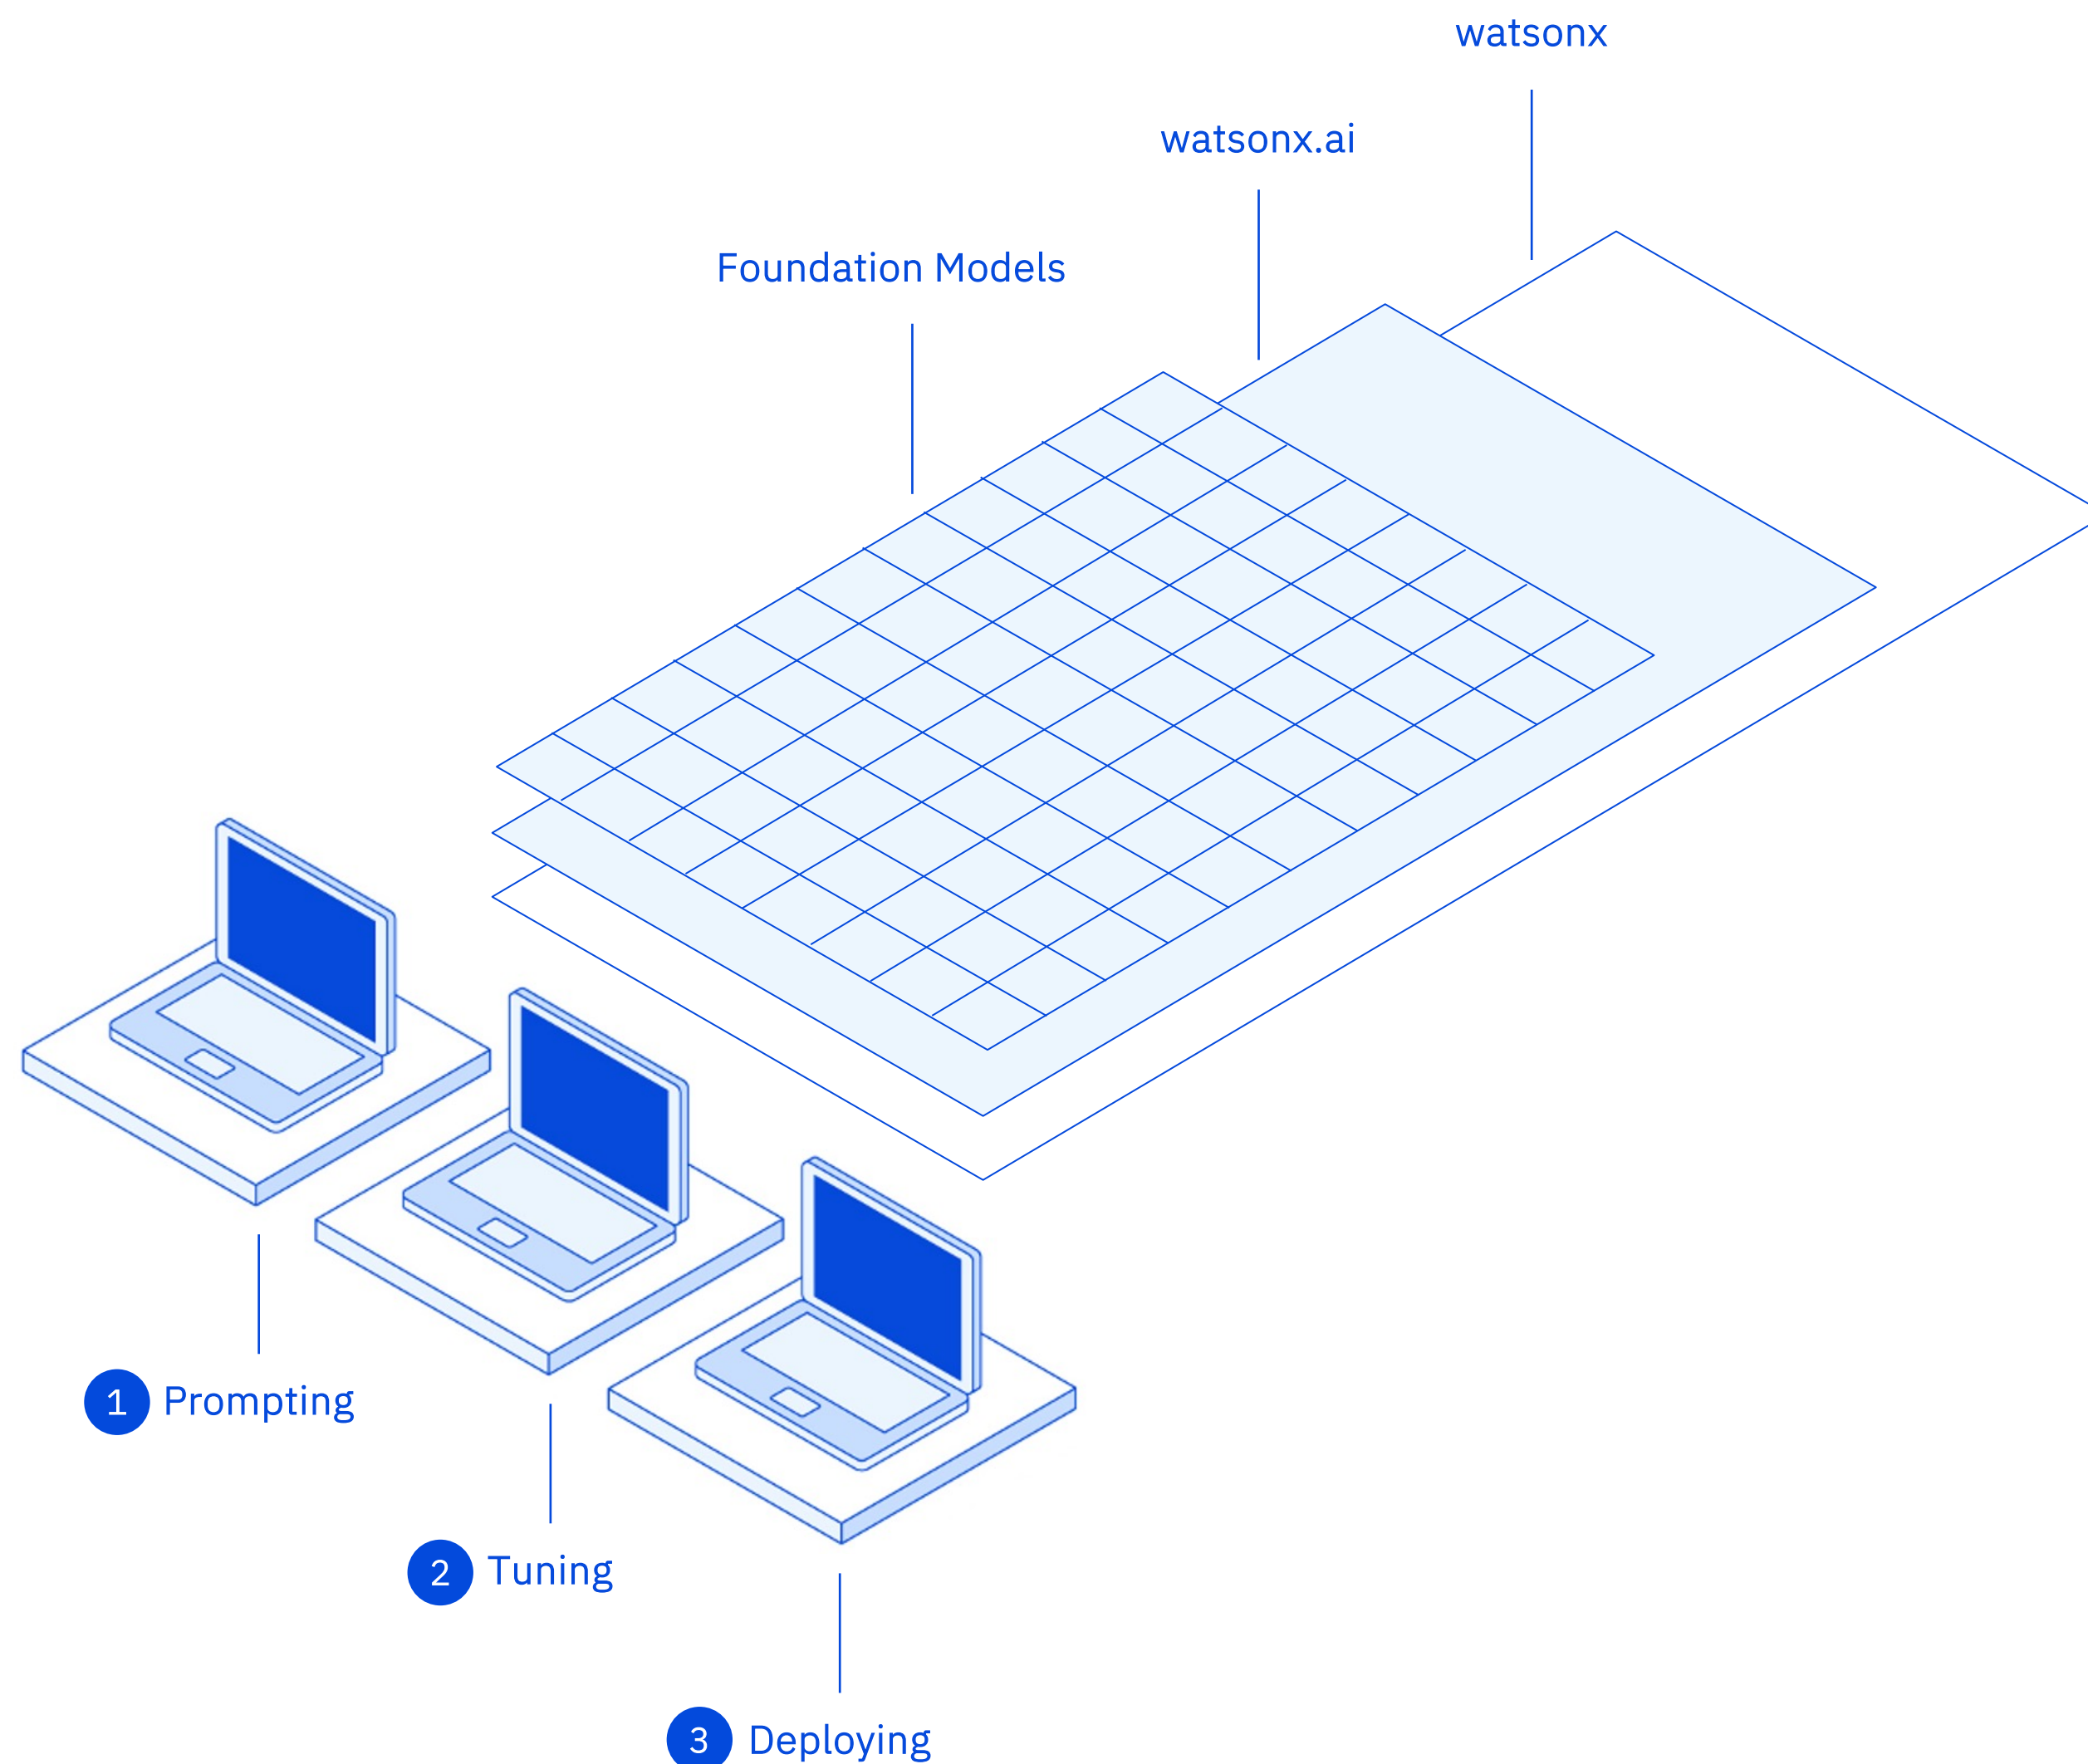

# Creating Value with Foundation Models

Fully deployed for enterprise use

# Creating Value with Foundation Models

Fully deployed for enterprise use

## 1 Prompt Lab

Leverage foundation models and generative AI with a fraction of the data, in less time, via no-code or full SDK and API libraries.

## 2 Tuning Studio

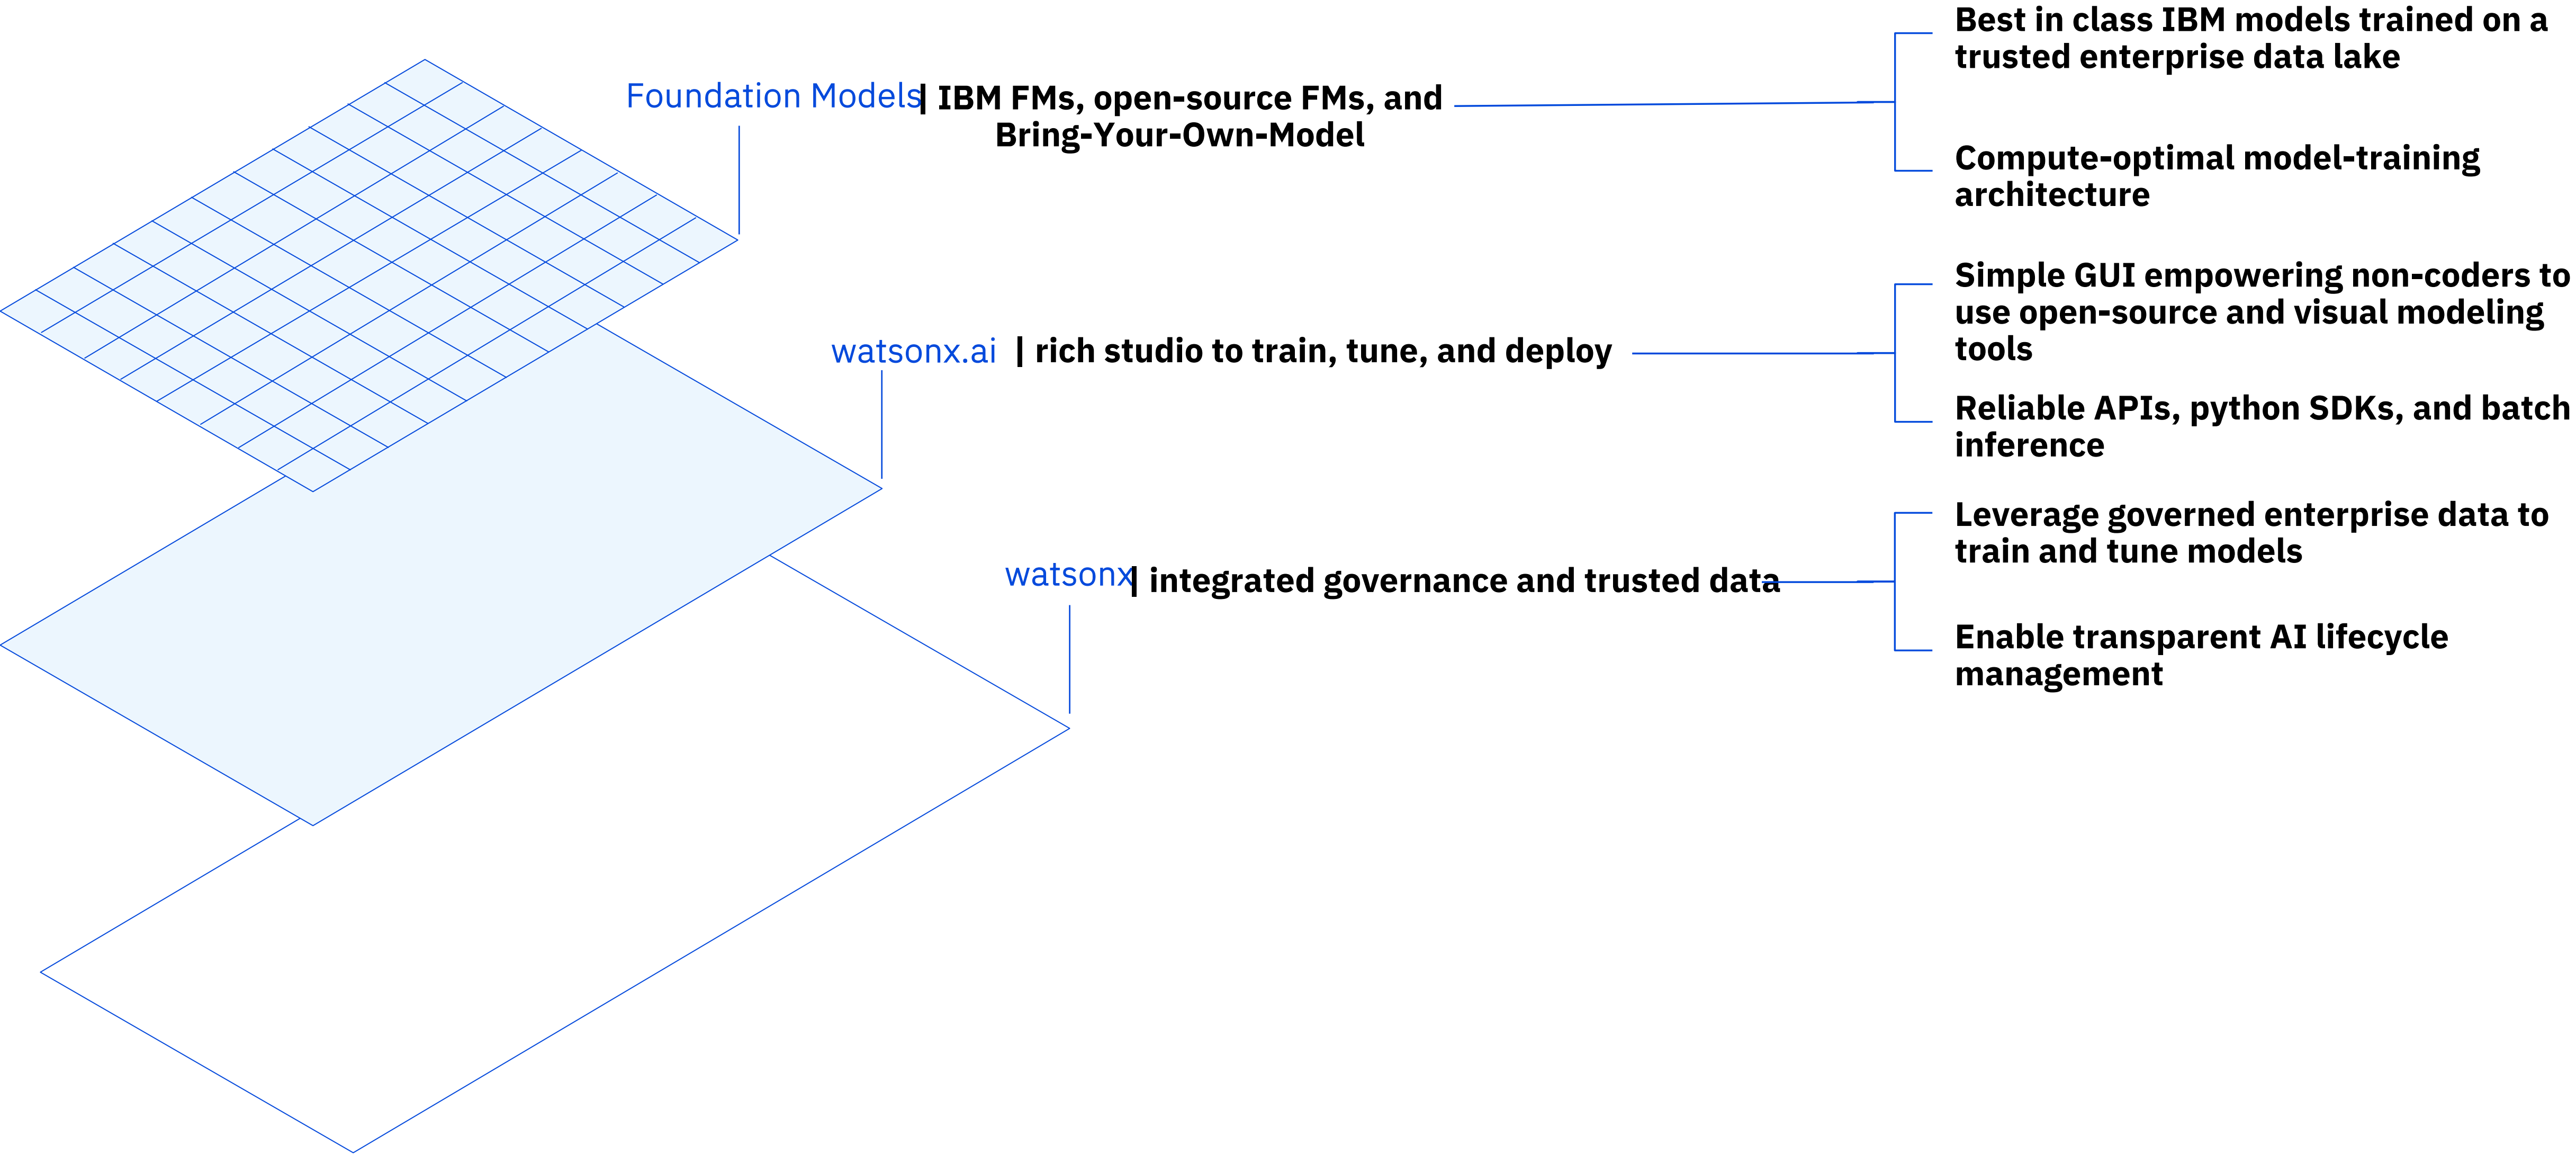

Use as few as 100 labeled data points to tune pre-trained models on your own data.

## 3 Deployments

Accelerate the full AI model lifecycle with all the tools and runtimes in one place.

# A Next-Generation Enterprise-Ready AI Studio

# Best In-Class Models Built on a Foundation of Trust

## Foundation Models | IBM FMs, open-source FMs, and Bring-Your-Own-Model

### IBM Foundation Models

Models trained on the largest trusted, enterprise grade data lake

Slate

Non-generative, encoder-only architecture

Sandstone

Light-weight encoder-decoder architecture

Granite

Generative specialization, decoder-only architecture

Obsidian

Novel-sparse universal transformer architecture

Moonstone

Novel architecture based on dense associated memory

And models for efficient domain and task specialization:

- Language (text, code)
- Finance
- Geospatial
- Chemistry
- Cybersecurity
- Legal
- Climate

### Open source Models

Access an open ecosystem through API integrations

- Experiment with open source models
- IBM and Hugging Face partnership demonstrates our shared commitment to delivering an open ecosystem approach that allows you to define the best models for your business needs.

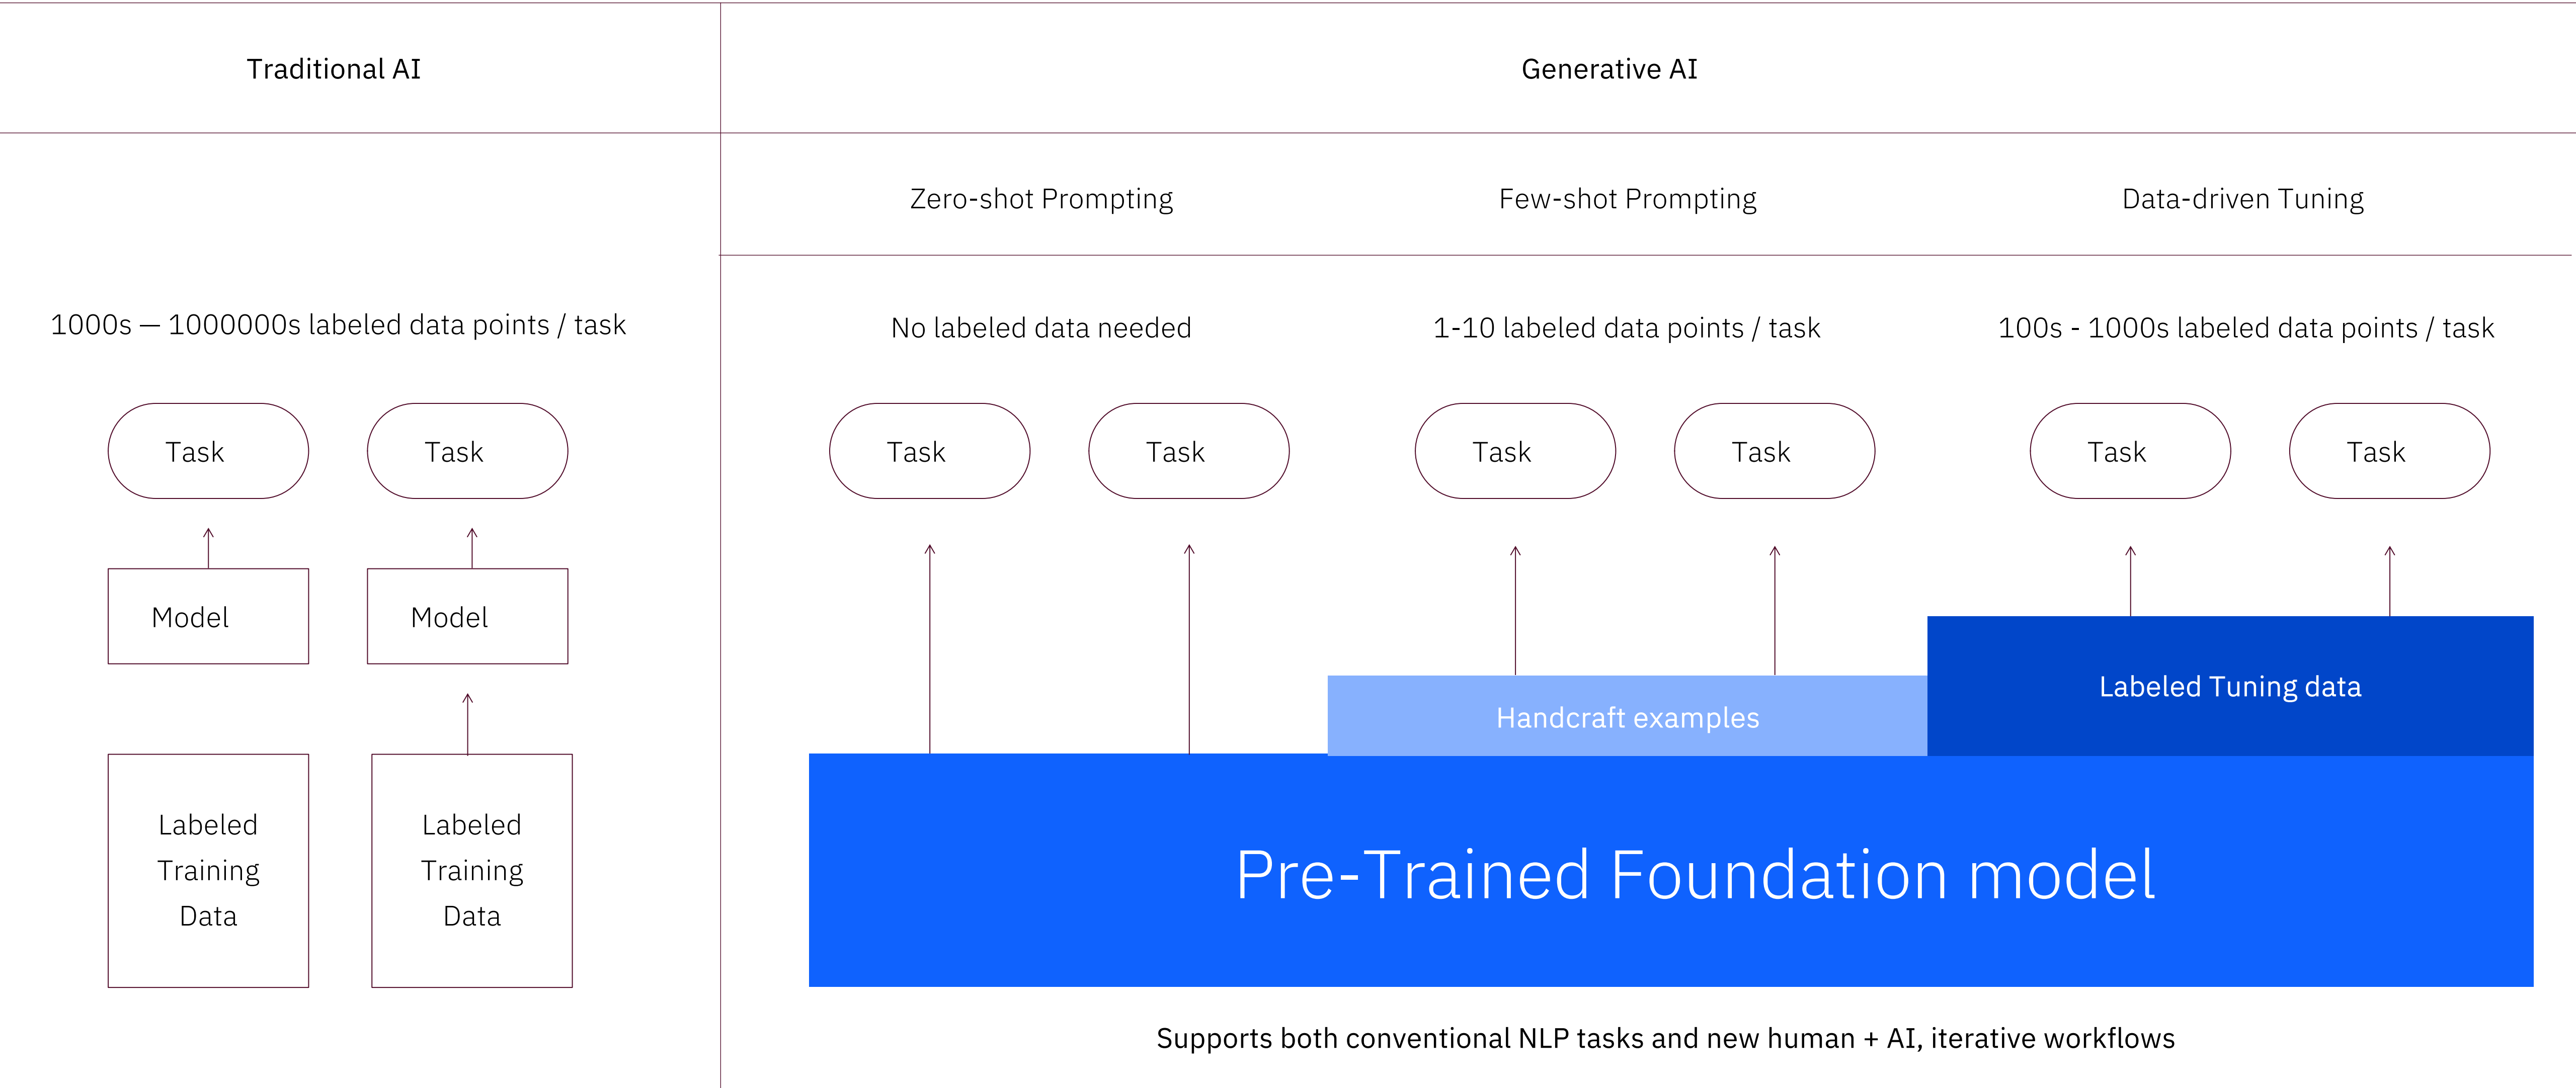

### Bring-your-own-model

Optional add-on for more flexibility

- Partner with IBM Research to pre-train your own foundation models

Model: flan-ul2 (20b) ▾

 

Summarization

 **Earnings call summary**  
Summarize financial highlights on an earnings call.

 **Meeting transcript summary**  
Summarize the discussion from a meeting transcript.

Classification

 **Scenario classification**  
Classify scenario based on project categories.

 **Sentiment classification**  
Classify reviews as positive or negative.

Generation

 **Marketing email generation**  
Generate email for marketing campaign.

 **Thank you note generation**  
Generate thank you note for workshop attendees.

Extraction

 **Named entity extraction**  
Find and classify entities in unstructured text.

 **Fact extraction**  
Extract information from SEC 10-K filing.

Question answering

 **Questions about an article**

Set up ^

Instruction (optional) ⓘ

Extract the line of credit facility maximum borrowing capacity from the 10-K filing.

Examples (optional) ⓘ

10-K filing:	Line of credit facility maximum borrowing capacity:
The credit agreement also provides that up to \$250 million in commitments may be used for letters of credit.	\$250M
In March 2021, we upsized the credit agreement by \$50 million, which matures July 2023, to \$1.725 billion.	\$1.725B

Add example + 

Try ^

Test your prompt ⓘ

10-K filing:	Line of credit facility maximum borrowing capacity:
We prepared our impairment test as of December 2022 and determined that the fair values of each of our reporting units exceeded net book value by more than 25%. Among our re ...	\$2 billion ⓘ

Time running: 80 out of 40966.98 second

# Tune foundation models with labeled data

Start your custom tune by selecting a tuning method, foundation model, and use case. [Learn more](#)

-  Set up
-  Add training data
-  Edit parameters
-  Review and tune

## Set up your tune

Tuning method

Prompt tuning

The tuning method affects the way in which your foundation model is trained.

Foundation model

flan-ul2 (20b)

This foundation model is the base for your new tune.

Use case

Summarization

Select a use case that fits your goal.

# Bringing foundation models to enterprise AI

Hybrid cloud-native stack built with open technologies.

Train, tune and deploy foundation models at scale over all kinds of enterprise data.

Built for the enterprise with trust and governance at heart.

# Use Cases

AI Task	Use case / Demo
Q&A	Watson Assistant and Speech integration for Agent conversation as Amelia alternative
	Cisco Webex Contact Center and Watson Assistant for voice conversation using WA streaming API and handover to Live Agent with key insights about the conversation, e.g. summary, sentiment, entities, classification.
	Q&A with a tech support document repository for agent assist
	Q&A for product queries, recommendation possibly with a WA front end
	Document assistant: Q&A on PDFs and also help to fill forms using content retrieved from documents
	Knowledge management building single source of truth across PLM and EAM resources and enable Q&A
	Procurement advisor: Support, guidance for procurement process.
	Q&A for wealth management, for eg. financial/ earnings reports.
	Q&A on HR data, Digital Labor support for HR
	Operator assist using knowledge augmentation for application deployment to ABB platform
	Customer Assist for technical support during hardware ordering
	Assist for requirements engineering, find existing features for re-use
	Q&A across a large document set of various types in a Box folder
Classify	
	OCR with Document Understanding tech preview library - need to adapt the demo for invoice based on latest ask from Finacle
	Classification of support tickets, agent conversations, email threads to understand topics of conversations and accordingly determine next step, e.g. route tickets
	Classification of documents to enable tagging documents for quick navigation, search. Need to know labels in advance.
	Classify product feedback on product area, sentiment, tone with data in Airtable
Summarise	Classify PDF documents, text categorisation
	Summarise support tickets, email threads, agent conversations for agent assist
	Summarise tech support documents - need to work on large document summarization
	Summarization of docs in PDF, show in context of legal contracts
	Summarise customer feedback, account plan, performance in sales scenario with data in Airtable
	Summarise documents in a Box folder and also generate document tags, possible using Extract, Classify patterns

# Use Cases

AI Task	Use case / Demo
Extract	Entity / PII extraction from support tickets, agent conversations, text documents
	Extract entities/PII from PDF, also show topic, concept, relation extraction
	PII extraction for various format documents in folder and mark documents as confidential and mask information
	Extract insights from logs for preventive maintenance. Show how we can move from rules based to an LLM based approach find log patterns and anomalies.
	Extract insights from logs for threat detection. Show how we can move from rules based to an LLM based approach find log patterns and anomalies.
	Create insights from invoices by extracting content in different formats
	Extract action items from content for sales rep
	Extract entities and create summary from healthcare data
Code generation	Examples of SQL to MongoDB Query Language with prompt engineering in workbench
	Basic code translation example in workbench
	Synthetic data generation to train robots
Content generation	Content generation for marketing emails, creative briefs, blogs, posts, responses etc.
	Generate job description from open roles in HR
	Generate product spec from data in Airtable
	Auto-generate and summarise technical documents / user manuals specific to custom order
Other	Federated SQL query across data sources, e.g. PostgreSQL, COS, using watsonx.data platform.
	Model lifecycle management
	Build predictive models
	Hosting watsonx.ai
